Point of care decontamination

# DID YOU KNOW?

Ultrasound is changing. More ultrasound probes are in use today than ever before, supporting quick and effective patient diagnosis and imaging. For point-of-care ultrasound (POCUS) to work, the ultrasound devices need to be in the same location as the patient, and the decontamination products need to keep up.

POCUS presents a challenge to high-level disinfection machines. Machines are tied to a specific location as they might need a power supply, a water source, often they are only certified for use in that location due to staff and patient safety, they take up considerable space, and have detailed setup requirements.

Tristel is keeping up with the challenges of POCUS with portable, compact, fast, and effective decontamination products for ultrasound probes.

## COMPLETE DECONTAMINATION FOR YOUR ULTRASOUND DEVICES

-  **EFFECTIVE AGAINST HPV**
-  **HIGH-LEVEL DISINFECTION IN 30 SECS**
-  **EASY TO USE**

**Tristel**™
