

SURFACE DISINFECTANT

JET is a powerful sporicidal foam for the cleaning and disinfection of environmental surfaces and non-porous materials in laboratories.

JET is effective against viruses (including coronaviruses and influenza viruses), bacterial spores, protozoa, mycobacteria, fungi and vegetative bacteria in a 1-minute contact time.

JET destroys DNA and RNA in a matter of seconds. JET contains a non-ionic surfactant for added cleaning performance.

JET is the best safeguard wherever the risks of infection are highest. JET is compatible with hard, non-porous materials such as laminate, glass, plastic and stainless steel.

Effective against a wide range of microorganisms within a 1-minute contact time, including:

- *Bacillus* spp. spores
- *Mycobacteria* spp.
- *Aspergillus brasiliensis*
- *Pseudomonas aeruginosa*
- Coronaviruses*
- Norovirus
- Influenza A virus (H1N1)
- Hepatitis B virus (HBV)
- Human immunodeficiency virus (HIV)
- Carbapenem-resistant Enterobacteriaceae (CRE) *Klebsiella pneumoniae*
- *Staphylococcus aureus* including Methicillin-Resistance *S. aureus*
- Vancomycin-resistant Enterococci (VRE) *Enterococcus faecium*
- *Candida auris*
- *Escherichia coli*

Complete compliance with EN 14885:2018 and the latest efficacy regulatory requirements

SURFACES**

POWERED BY CHLORINE DIOXIDE FOAM

JET is built upon the same core chlorine dioxide technology as the Tristel medical device disinfectant products, but specially adapted for surface disinfection where cleaning and biofilm destruction are so important.

Chlorine dioxide is widely regarded as one of the most effective disinfectants for biofilm removal and prevention.

JET delivers chlorine dioxide as a foam. It creates no aerosols when used.

SAVING SPACE, REDUCING WASTE

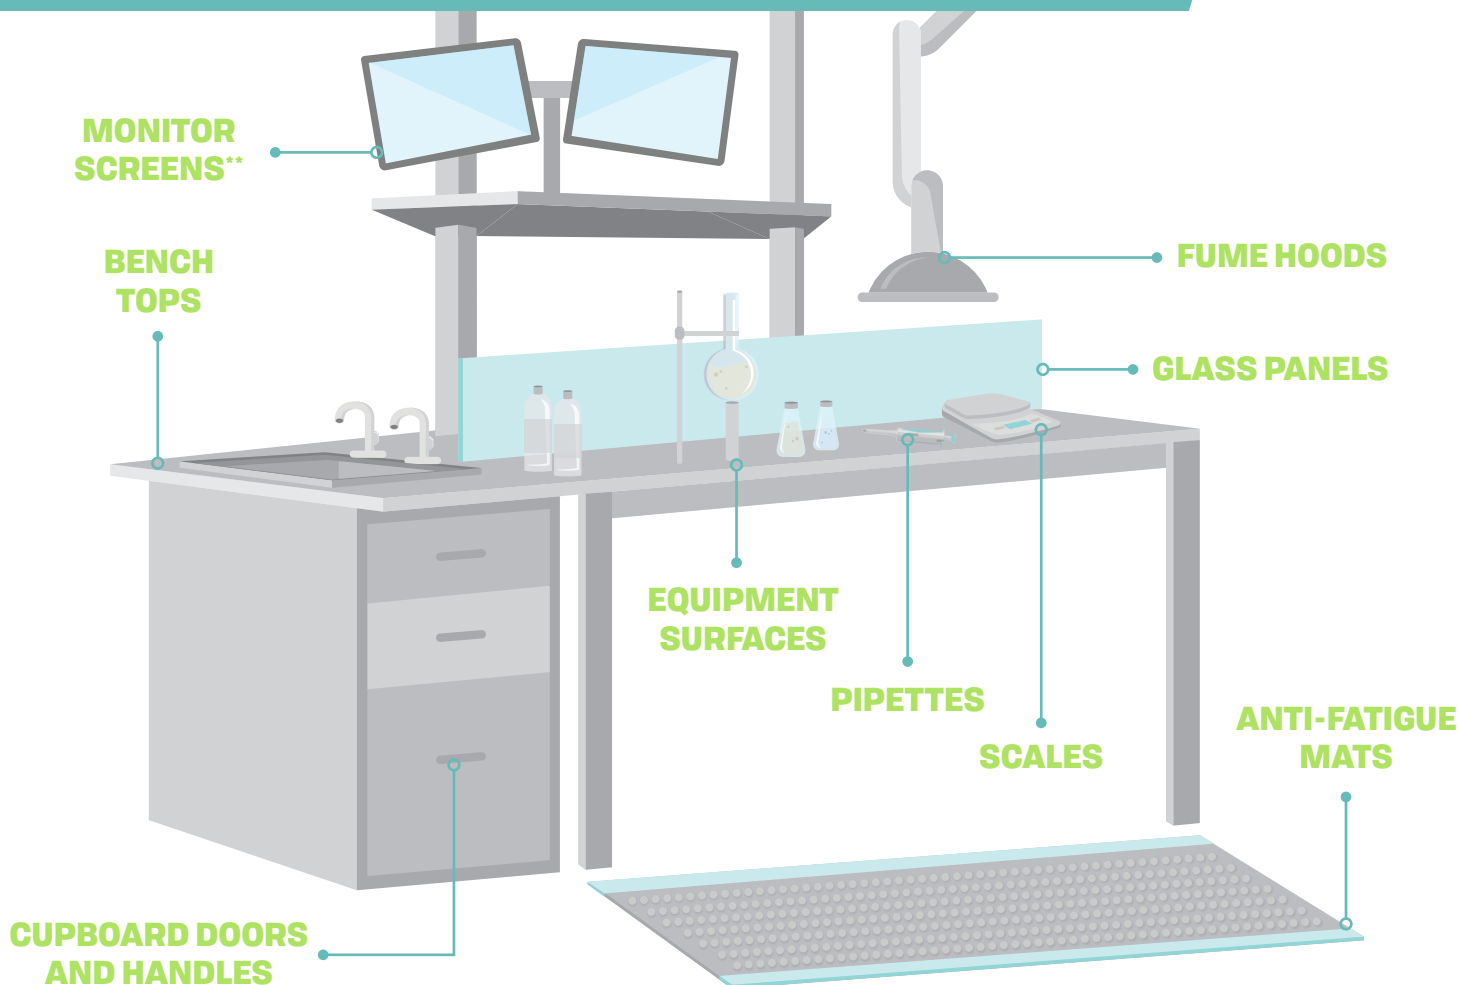

3.5 Kilos

0.8 Kilos

Efficacy with the standard wipe in EN 16615 means JET can be used with any sustainably sourced wipe, avoiding the use and waste of plastic wipes.

IDEAL FOR USE ON NON-POROUS HIGH-TOUCH SURFACES SUCH AS:

**AVAILABLE TO
