

POD CLO2™

POWERED BY CHLORINE DIOXIDE

Reimagining Surface Disinfection

THE POD CLO2 FAMILY

THE POD CLO2 JOURNEY

Simply burst, fill and apply

POD CLO2 uses plastic considerably, the single use **POD CLO2** capsules are completely recyclable, packaging and all!

Select a **POD CLO2 5** or **POD CLO2 10⁺5** capsule.

Burst the **POD CLO2** capsule into a **TANK** or **TILT** vessel.

Fill up the **TANK CLO2 Reusable Bottle** which can be paired with any of the available applicators.

The core components of the **POD CLO2** Family are reusable.

Apply the working solution onto a wipe, or directly onto a surface and wipe.

POWERED BY CLO2

Built on the robust chlorine dioxide (ClO₂) chemistry used in Tristel’s medical device decontamination range, **POD CLO2** ensures effective and dependable disinfection.

Each capsule contains two separate compartments with Base Solution (citric acid) and Activator Solution (sodium chlorite). Simply burst the capsule to activate the CLO2 chemistry, which can be diluted in 5 or 10 litres of water.

ClO₂ is an oxidiser that effectively denatures proteins and genetic material in microorganisms. Due to the mode of action of Tristel’s ClO₂, microorganisms cannot build resistance!

SPORICIDAL IN 5 MINUTES

Engineered for excellence, proven to target and eliminate a broad spectrum of pathogens, including those that cause the most challenging hospital-acquired infections (HAIs). By integrating **POD CLO2** into you daily infection control routines, you are proactively preventing HAIs and reducing the prevalence of antimicrobial resistant pathogens, safeguarding both patient and staff wellbeing.

Sporicidal	EN 17126
Mycobactericidal	EN 14348
Virucidal	EN 14476
Yeasticidal	EN 13624
	EN 16615
Fungicidal	EN 13624
Bactericidal	EN 13727
	EN 16615

<i>Bacillus cereus</i>	<i>Candida albicans</i>
<i>Bacillus subtilis</i>	<i>Candida auris</i>
<i>Clostridioides difficile</i>	<i>Enterococcus hirae</i>
Tuberculosis causing mycobacteria	<i>Pseudomonas aeruginosa</i>
Adenovirus Type 5	Carbapenem-resistant Enterobacteriaceae (CRE) <i>Klebsiella pneumoniae</i>
Murine Norovirus	Methicillin-resistant <i>Staphylococcus aureus</i> (MRSA)
Bovine Coronavirus	Multidrug-resistant <i>Acinetobacter baumannii</i> (MDRAB)
<i>Aspergillus brasiliensis</i>	Vancomycin-resistant Enterococci (VRE) <i>Enterococcus faecium</i>

HEALTHCARE IS DROWNING IN PLASTIC WIPES

The solution is here with **POD CLO2**

Staff in hospitals around the world are working hard to maintain safe environments for their patients, by cleaning and disinfecting surfaces. For decades, pre-wetted wipes have been the go-to product.

The uncomfortable truth is that most pre-wetted wipes are made entirely from plastic.

Putting this into perspective, the NHS has been known to use over **400 tons of plastic wipes** in just one year. That amount of plastic is heavier than over **80 ambulances**.

It's not just the use of plastic wipes that does harm, but the manufacturing, shipping, storage and disposal of them too.

Every element of the **POD CLO2** capsule, including the packaging, is readily **recyclable**. Even the capsule laminate!

POD CLO2 capsules save on **space, waste, and emissions**.
