Tristel chlorine dioxide is effective against SARS-CoV-2, the virus which causes COVID – 19

A range of Tristel chlorine dioxide products have successfully been used by healthcare and emergency services professionals in the fight against the spread of the SARS-CoV-2, the cause of COVID-19.

Chlorine dioxide is a rapid and effective biocide. Tristel products are proven to be virucidal in accordance with European and American test methodologies and regulatory requirements.

In the absence of SARS-CoV-2 test availability, surrogate viruses including feline coronavirus, murine hepatitis virus and human coronavirus have been used by the industry to demonstrate efficacy.

Laboratory testing is now available to assess disinfectant efficacy against pathogenic SARS-CoV-2.

A representative sample of Tristel chlorine dioxide has been tested by a United States Biosafety Category 3 laboratory.

Results demonstrate Tristel chlorine dioxide **completely inactivates SARS-CoV-2 in 30 seconds in the presence of soiling** in accordance with EN 14476:2013+A2:2019, at a concentration of 20 parts per million (ppm).

This is another independent verification of the power of chlorine dioxide and its efficacy against a wide variety of microorganisms.

The range of Tristel chlorine dioxide products that are sporicidal disinfectants with full spectrum of virucidal efficacy includes:

- Tristel Fuse for Surfaces
- Tristel Fuse for Stella
- Tristel Duo ULT
- Tristel Duo OPH
- Tristel Duo NCU
- JET
- SHOT
- Tristel Sporicidal Wipes
- Tristel Trio Wipes System
- Crystel Titanium Chlorine Dioxide Sporicidal Wipes
- Crystel Titanium Sterile Chlorine Dioxide Spray
- Anistel SWIFT
