TRISTEL CHLORINE DIOXIDE (ClO₂)

JET LUX is built upon the same chlorine dioxide (ClO₂) chemistry as the Tristel Medical Device Decontamination products. **JET LUX** incorporates two separate compartments that contain Base Solution (citric acid) and Activator Solution (sodium chlorite).

When mixed by pulling the **JET LUX** trigger, ClO₂ chemistry is generated. **JET LUX** contains an amphoteric surfactant for added cleaning performance. ClO₂ eliminates microorganisms by destroying their molecular structures. This means that harmful microbes cannot build resistance to ClO₂.

CREATE A COST-EFFECTIVE AND MORE SUSTAINABLE SPORICIDAL WIPE

Efficacy with the standard wipe used in EN 16615 means **JET LUX** can be paired with any dry wipe. Use a microfibre cloth or a biodegradable dry wipe to create sporicidal wipes. You can stop using pre-wetted plastic wipes.
