

### HOW TO USE

Take one sachet, fold in half across the dotted line and squeeze until the centre seal bursts. Allow 5 minutes for the two solutions to mix and turn yellow.

While you wait, pour 5 litres of ambient temperature water into a bucket. Do not use hot water.

Tear or cut the sachet and pour the contents into the 5 litres of water, taking care to keep the sachet under the water line to avoid splashing.

Soak your mop in the prepared solution.

Time to get the job done. Apply FUSE to the floor and spread with the saturated mop.

Ensure the floor remains wet for 5 minutes. Apply additional solution as needed. Leave to dry.

### PRE-USE CHECKS

Some important reminders before starting:

- Use biocides safely. Always read the label and product information before use.
- Wear the appropriate personal protective equipment (PPE).
- FUSE is for professional use only.
- Do not apply to brass, copper, aluminium, mild steel, or silver surfaces.
- Prepare FUSE in a well-ventilated area and ensure the floor is free from heavy soiling before use.

### BIG IMPACT

One box of FUSE delivers 200 litres of mopping solution. That is enough to cover 4000m<sup>2</sup>, the surface area of 20 tennis courts!

### STORAGE CONDITIONS

FUSE sachets can be kept for 3 years before being used, and should be stored in a cool dry place, out of direct sunlight, between 10°C - 35°C. Once mixed with water, solution can be kept for up to 24 hours when stored in an airtight container. Dispose of solution according to local guidelines.

Refer to the User Guide for full instructions.
